

NEPTUNE 750

Liquid filling machine

Dimensions LxWxH

450 x 400 x 550 mm

Cleaning

- Exceptional cleaning process of our system, resulting in greater operational efficiency.

Dosage range

- Volumes ranging from 4 to 750 ml, depending on specific requirements. Possibility of using up to two dosers working in parallel.

Precision

- Dosing accuracy well below 1% for the above-mentioned dosages.

Versatility

- Possibility to dose any type of volume and fluid

Certified materials

- The materials used for the parts in contact with the product are in accordance with current regulations.

Technologies

- Thanks to this volumetric doser, it's possible to dose volumes up to 750 ml with high precision (dosing accuracy $\pm 1\%$). Is particularly suitable for the food industry, in particular for dosing oil, balsamic vinegar and sauces.

Competitive pricing

- Available at a lower price than conventional dosing systems.

2 construction options

- Autonomous machine: we offer a complete and autonomous version of our machine that can be easily used by the operator through the panel computer.
- Integrated dosing system: we provide the system to be installed directly in your machines, guaranteeing maximum flexibility. In this case, the dosing is activated by the packaging machine's signal, minimizing space problems thanks to the easy configuration with the nozzle and the tube entering in the packaging machine.
